COMPANY PROFILE

1. ABOUT US

Green Leaves Consulting Services Pvt. Ltd. is a registered private limited company incorporated in Nepal on January 1, 2021, under the Companies Act, 2006. The company is headquartered at Ward No. 32, Jadibuti, Kathmandu Metropolitan City, Kathmandu, Nepal, and operates under the jurisdiction of the Inland Revenue Office, Koteshwor.

We are a sister company of Janda Devi Nepal Energy Pvt. Ltd. (JDNE), one of Nepal's leading renewable energy project development and EPC firms. Drawing on the group's proven project management expertise and institutional strength, Green Leaves provides specialised consultancy services in solar power, wind energy, and renewable energy project development across Nepal.

Our team brings together professionals with hands-on experience in solar and wind energy engineering, renewable energy project development, and environmental advisory. We work closely with developers, institutions, and the private sector to deliver practical, results-driven solutions that accelerate Nepal's transition to clean, reliable, and sustainable energy.

2. MISSION, VISION & CORE VALUES

Our Mission

To provide high-quality, evidence-based consultancy services in solar, wind, and renewable energy that accelerate Nepal's transition to clean, reliable, and sustainable power, while delivering lasting value to communities, businesses, and the broader South Asian region.

Our Vision

To be Nepal's most trusted and impactful renewable energy consultancy, recognized for transforming the nation's energy landscape through innovation, technology, and a deep commitment to sustainability.

Core Values

- Sustainability – We integrate environmental stewardship into every aspect of our work.
- Integrity – We operate with transparency, honesty, and professionalism at all times.
- Excellence – We pursue the highest standards in technical quality and client service.
- Innovation – We embrace modern practices and research-driven solutions.
- Community – We put the well-being of local communities at the heart of our approach.

3. OUR SERVICES

Green Leaves Consulting Services offers a comprehensive range of services tailored to the needs of enterprises, development organizations, government bodies, and private sector clients.

3.1 Solar Energy Development & Advisory

- Feasibility studies and site assessment for rooftop and ground-mounted solar PV projects.
- Technical design, engineering, and procurement support for solar PV installations.
- Grid connection planning and interconnection studies for solar power plants.
- Operation and maintenance (O&M) advisory and performance monitoring for solar PV systems.

3.2 Wind Energy Development & Advisory

- Wind resource assessment and site identification for wind farm projects.
- Feasibility studies and techno-economic analysis for wind power projects.
- Environmental and social impact assessments for wind energy developments.
- Grid integration and transmission planning for wind power generation.

3.3 Environmental & Sustainability Consulting

- Environmental Impact Assessments (EIA) for solar, wind, and other renewable energy projects.
- Climate-smart planning, carbon footprint analysis, and emissions reduction studies.
- Project feasibility studies, baseline surveys, and monitoring & evaluation for renewable energy projects.
- Grant writing, proposal development, and investor/donor liaison support for renewable energy initiatives.

3.4 Transmission, Grid Infrastructure & Green Building (in collaboration with JDNE)

- Advisory on transmission lines, substations, and grid evacuation infrastructure for solar and wind projects.
- Green building design and energy efficiency consulting for commercial and industrial facilities.
- Integration of solar and wind energy solutions into industrial and commercial operations.

4. PROJECT PORTFOLIO

Green Leaves Consulting Services has been actively involved in the planning, development, and implementation of the following projects in collaboration with our sister company, Janda Devi Nepal Energy Pvt. Ltd. (JDNE). These projects reflect our group's capacity to execute large-scale, technically complex assignments across Nepal.

4.1 Solar PV Projects

Jhapa Solar PV Project – 12 MWp | Shivasatakshi Municipality, Jhapa | Completed 2023

A utility-scale solar plant developed across 15.57 hectares, comprising 22,232 solar modules and two 5 MVA inverters. The plant is connected to the NEA 33 kV distribution centre, strengthening clean energy supply in eastern Nepal.

Beldiya Solar Project – 12 MWp | Nawalpur | Ongoing

A grid-connected solar PV project expected to generate over 20 GWh of clean electricity annually, contributing to renewable energy expansion and grid stability in the region.

Butwal Solar PV Project – 8.5 MW | Tillottama Municipality, Rupandehi | Completed

A large-scale installation spanning 17.2 hectares with 31,280 solar modules and 10 inverters. Power is evacuated through the 33 kV Amuwa Substation, supporting Nepal's national renewable energy capacity.

Janaki Solar Project – 6 MWp | Banke | Ongoing

An ongoing grid-connected project expected to generate over 10 GWh annually, expanding access to reliable clean energy and reducing carbon emissions in the region.

Jay Ambe Captive Solar PV Project – 12 MWp | Banke | Ongoing

A captive solar project for industrial energy consumption, designed to enable the facility to operate with minimal dependency on NEA grid power through sustainable on-site generation.

Dabur Nepal Pvt. Ltd. Solar Project – 976 kWp | Jeetpur Simara | Partially Completed

A 736 kWp rooftop system generating approximately 1,010 MWh annually, with estimated monthly savings of NPR 700,000. An additional 240 kWp ground-mounted system is currently under implementation.

College of Medical Sciences Rooftop Solar – 500 kWp | Bharatpur, Chitwan | Ongoing

A 500 kWp rooftop system expected to generate approximately 682,460 kWh annually, supporting sustainable energy use within a major academic medical institution.

Hotel Holiday Inn Express Rooftop Solar – 60 kWp | Naxal, Kathmandu | Completed 2026

A 60 kWp grid-connected system generating approximately 88,351 kWh annually, delivering estimated savings of NPR 1.13 million per year for the hospitality operator.

Galaxy Garden Resort Rooftop Solar – 100 kWp | Bharatpur | Ongoing

A 100 kWp rooftop system projected to generate approximately 169,755 kWh annually with an estimated payback period of three years, supporting clean energy in the hospitality sector.

Kutumba Hotel Rooftop PV Project – 12 kWp | Lalitpur | Completed 2022

A commercial rooftop installation generating approximately 4,900 kWh annually with estimated savings of USD 24,900 over 10 years, demonstrating the viability of solar energy in Nepal's hospitality industry.

Shanta Complex PV Plant – 50.7 kWp | Putalisadak, Kathmandu | Completed 2024

A rooftop installation generating 73.81 MWh annually, contributing to long-term urban energy savings of NPR 811,800 over 10 years.

Sunmai Water Solar PV Project – 50.73 kWp | Jhapa | Completed April 2024

A rooftop industrial solar system of 114 modules and a 40 kW string inverter, supplying three-phase power to the facility's distribution system and reducing dependence on grid electricity.

4.2 Transmission Line & Substation Projects

33 kV Transmission Line – Butwal Solar PV Plant

Construction of a 33 kV single circuit transmission line for grid integration of the Butwal Solar PV Plant, including route planning and infrastructure development.

33 kV Bay – Amuwa Substation

Construction of the 33 kV bay at Amuwa Substation enabling power evacuation from the Butwal Solar PV Plant across the Tinahu River basin.

33 kV Transmission Line – Shivasatakshi, Jhapa (1 km)

Development of a 1 km transmission line connecting the Jhapa Solar Project to Buluchwok Substation for reliable integration into the national grid.

33 kV Bay – Buluchwok Substation

Technical implementation of a 33 kV bay at Buluchwok Substation supporting power evacuation from the Jhapa Solar Project.

33 kV Kohalpur–Nepalgunj Transmission Line – 11.6 km

Technical design and engineering documentation for an 11.6 km transmission line connecting the Janaki Solar Project to New Nepalgunj NEA DCS Substation.

33 kV Beldiya–Mukundapur Transmission Line – 5.6 km

Technical design and planning for a 5.6 km transmission line connecting the Beldiya Solar Project to Mukundapur NEA Substation at Nawalpur.

5. COMPANY REGISTRATION DETAILS

Company Name: Green Leaves Consulting Services Pvt. Ltd.

Company Registration No.: 251794/077/078

PAN No.: 609789358

Date of Incorporation: January 1, 2021

Company Type: Private Limited

Registered Office: Ward No. 32, Jadibuti, Kathmandu Metropolitan City, Kathmandu

Tax Office: Inland Revenue Office, Koteshwor

Business Activities: Solar and Wind Renewable Energy Project Development & Consultancy

Sister Company: Janda Devi Nepal Energy Pvt. Ltd. (JDNE)
